# Chapter 1. Description

The present document provides the Implementation Conformance Statement (ICS) proforma for the conformance test suite for the Eclipse Titan TTCN-3 implementation as defined in [ES 201 873-1](#) in compliance with the relevant guidance given in the proforma for TTCN-3 reference test suite [TS 102 995](#).

In the present document only the core language features, specified in [ES 201 873-1](#) have been considered but not

- the tool implementation (see [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; Part 5: TTCN-3 Runtime Interface \(TRI\)](#) and [ETSI ES 201 873-6: Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; Part 6: TTCN-3 Control Interface \(TCI\)](#)),
- language mapping (see [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; Part 7: Using ASN.1 with TTCN-3](#), [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; Part 8: The IDL to TTCN-3 Mapping](#) and [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; Part 9: Using XML schema with TTCN-3](#))
- and language extension (see e.g. [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; TTCN-3 Language Extensions: Configuration and Deployment Support](#), [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; TTCN-3 Language Extensions: Advanced Parameterization](#) and [Methods for Testing and Specification \(MTS\); The Testing and Test Control Notation version 3; TTCN-3 Language Extensions: Behaviour Types](#)) aspects.

## 3.1. Definitions

**Abstract Test Suite (ATS):**

Test suite composed of abstract test cases

**Implementation Conformance Statement (ICS):**

Statement made by the supplier of an implementation claimed to conform to a given specification, stating which capabilities have been implemented

**ICS proforma:**

Document, in the form of a questionnaire, which when completed for an implementation or system becomes an ICS

**Implementation eXtra Information for Testing (IXIT):**

Statement made by a supplier or implementor of an IUT which contains or references all of the information related to the IUT and its testing environment, which will enable the test laboratory to run an appropriate test suite against the IUT

**IXIT proforma:**

Document, in the form of a questionnaire, which when completed for the IUT becomes the IXIT

**Implementation Under Test (IUT):**

Implementation of one or more OSI protocols in an adjacent user/provider relationship, being part of a real open system which is to be studied by testing

# Chapter 4. Instructions for completing the ICS proforma

## 4.1. Other information

More detailed instructions are given at the beginning of the different clauses of the ICS proforma.

The supplier of the implementation shall complete the ICS proforma in each of the spaces provided. If necessary, the supplier may provide additional comments separately in Clause A.4.

### 4.1.1. Purposes and structure

The purpose of this ICS proforma is to provide a mechanism whereby a TTCN-3 tool vendor of the [TTCN-3 core language](#) may provide information about the implementation in a standardized manner.

The ICS proforma is subdivided into clauses for the following categories of information:

- instructions for completing the ICS proforma;
- identification of the implementation;
- ICS proforma tables (containing the global statement of conformance).

### 4.1.2. Conventions

The ICS proforma is composed of information in tabular form in accordance with the guidelines presented in [ISO/IEC 96467](#) .

- Item column

It contains a number that identifies the item in the table.

- Item description column

It describes each respective item (e.g. parameters, timers, etc.).

- Reference column

It gives reference to the [TTCN-3 core language](#), except where explicitly stated otherwise.

- Status column

The following notations, defined in [ISO/IEC 96467](#) , are used for the status column:

**m**

mandatory - the capability is required to be supported.

**n/a**

not applicable - in the given context, it is impossible to use the capability. No answer in the

support column is required.

**u**

undecided

**o**

optional - the capability may be supported or not.

**o.i**

qualified optional - for mutually exclusive or selectable options from a set. **i** is an integer which identifies a unique group of related optional items and the logic of their selection which is defined immediately following the table.

**ci**

conditional - the requirement on the capability ("m", "o" or "n/a") depends on the support of other optional or conditional items. **i** is an integer identifying a unique conditional status expression that is defined immediately following the table. For nested conditional expressions, the syntax **IF ... THEN (IF ... THEN ... ELSE...)** **ELSE ...** shall be used to avoid ambiguities. If an **ELSE** clause is omitted, **ELSE n/a** shall be implied.

**NOTE**

Support of a capability means that the capability is implemented in conformance to the [TTCN-3 core language](#).

- Support column

The support column shall be filled in by the supplier of the implementation. The following common notations, defined in ISO/IEC 96467 [2], are used for the support column:

Y or y supported by the implementation.

N or n not supported by the implementation.

N/A or n/a or "no answer required" (allowed only if the status is N/A, directly or after evaluation of a conditional status).

- Values allowed column

This column contains the values or the ranges of values allowed.

- Values supported column

The support column shall be filled in by the supplier of the implementation. In this column the values or the ranges of values supported by the implementation shall be indicated.

- References to items

For each possible item answer (answer in the support column) within the ICS proforma, a unique reference exists. It is defined as the table identifier, followed by a slash character "/", followed by the item number in the table. If there is more than one support column in a table, the columns shall be discriminated by letters (a, b, etc.) respectively.

EXAMPLE: 5/4 is the reference to the answer of item 4 in Table 5.

## 4.2. Identification of the implementation

Identification of the Implementation under Test (IUT) and the system in which it resides - the System Under Test (SUT) should be filled in so as to provide as much detail as possible regarding version numbers and configuration options.

The product supplier information and client information should both be filled in if they are different.

A person who can answer queries regarding information supplied in the ICS should be named as the contact person.

# Chapter 5. ICS proforma tables

## 5.1. Global statement of conformance

	(Yes/No)
Are all mandatory capabilities implemented?	

**NOTE** Nonsupported mandatory capabilities are to be identified in the ICS, with an explanation of why the implementation is nonconforming.

## 5.2. Basic language elements

Table 1. Basic language elements

Item	TC/TP reference	purpose	Reference in ES 201 873-1	Status	Support
1	NegSyn_05_To pLevel_001	When the IUT loads a module containing some definitions before the module declaration then the module is rejected.	Clause 5	m	y

## 5.3. Identifiers and keywords

Table 2. Identifiers and keywords

Item	TC/TP reference	purpose	Reference in ES 201 873-1	Status	Support
1	NegSem_0501_Identifier_001	Cannot pass a charstring value to an integer variable.	Clause 5.1	m	y
2	NegSyn_0501_Identifier_001	When the IUT loads a module containing an identifier named with a keyword then the module is rejected.	Clause 5.1	m	y
3	Syn_0501_Identifier_001	The IUT handle the identifiers case sensitively.	Clause 5.1	m	y

## 5.4. Scope rules

Table 3. Scope rules

Item	TC/TP reference	purpose	Reference in ES 201 873-1	Status	Support
1	NegSem_0502_Scope_001	The IUT correctly handles definitions of local scope	Clause 5.2	m	y
2	NegSem_0502_Scope_002	The IUT correctly handles definitions of local scope	Clause 5.2	m	y
3	NegSem_0502_Scope_003	The IUT correctly handles definitions of local scope	Clause 5.2	m	y
4	Sem_0502_Scope_001	The IUT handle scope hiearchy of component constants.	Clause 5.2	m	y
5	Sem_0502_Scope_002	The IUT handle scope hiearchy with component booleans.	Clause 5.2	m	y
6	Sem_0502_Scope_003	The IUT handles scope hierarchy via functions.	Clause 5.2	m	y
7	Sem_0502_Scope_004	The IUT correctly handles the scope of definitions made in the module part.	Clause 5.2	m	y
8	Sem_0502_Scope_008	The IUT correctly handles definitions of extended component scope	Clause 5.2	m	y
9	Syn_0502_Scope_001	The IUT supports all the nine scope units.	Clause 5.2	m	y

## 5.5. Scope of formal parameters

Table 4. Scope of formal parameters

Item	TC/TP reference	purpose	Reference in ES 201 873-1	Status	Support
1	Sem_050201_Scope_of_parameters_001	The IUT correctly handles scope of formal function parameters	Clause 5.2.1	m	y
2	Sem_050201_Scope_of_parameters_002	The IUT correctly handles scope of formal function parameters	Clause 5.2.1	m	y

## 5.6. Uniqueness of identifiers
